

BIRD

Bioinformatics, Research & Data
Bioinformatique, Recherche & Données

Practical bioinformatics, data analysis, training, and reproducible research workflow support for laboratories and life sciences teams.

Bioinformatics support for your next research project

From study design to reproducible analysis, workflow development, training, and scientific mentorship.

Free 30-minute initial consultation available for new projects.

Use this meeting to discuss your project goals, data type, timeline, current challenges, and possible next steps. This free consultation is intended for general project orientation only. Detailed study design, data analysis, troubleshooting, code review, and technical support are available as separate services.

1. Study Design & Bioinformatics Consultation

Planning support before data generation or analysis.

- Research question and analysis strategy
- Sample groups, controls, and replicates
- Metadata and sample organization
- Sequencing and downstream analysis planning
- Data management and reproducibility advice

2. Omics & NGS Data Analysis

Support for omics and sequencing data analysis.

- RNA-seq and differential expression
- Genomics and variant-analysis support
- PhIP-seq and peptide-enrichment analysis
- Quality control, exploratory analysis, figures, and reports
- Reproducible scripts and documentation

3. PhIP-seq & Peptide-Library Design

Specialized support for PhIP-seq and peptide-library design.

- Peptide tiling strategy
- Antigen, protein, organism, or target selection
- FASTA and protein sequence preparation
- Annotation tables and control peptide planning
- Downstream enrichment-analysis strategy

4. Pipelines, Automation & Troubleshooting

Support with computational workflows and technical bottlenecks.

- Python, R, Bash, and Linux troubleshooting
- Pipeline development and optimization
- FASTQ organization and data-transfer workflows
- HPC and SLURM/Torque support on Alliance clusters
- README files, SOPs, and workflow handover

5. Training for Biologists & Research Teams

Personalized training for students and research team members.

- Python, R, and Bash for biologists
- Basics of bioinformatics and sequencing
- Public databases, including NCBI, SRA, GEO, GO, and BLAST
- Biological data file formats, including FASTA, FASTQ, BAM, VCF, and GTF/GFF
- Research data organization and reproducible workflows

6. Mentorship & Scientific Guidance

Technical guidance for students and research teams.

- Student project support
- Analysis planning and code review
- Data interpretation support
- Methods and workflow documentation
- Scientific and technical communication support

Flexible formats: free initial consultation ▪ hourly technical support ▪ fixed-price project packages ▪ customized lab workshops ▪ one-on-one training ▪ monthly lab-support plans.

Professional note: Services are provided independently through BIRD and can be adapted to each laboratory's needs, budget, and timeline. Institutional logos, confidential information, or unpublished project details are not used without prior authorization.

BIRD Service Menu

Flexible bioinformatics, data analysis, training, and workflow support

BIRD offers project-based and ongoing support for academic laboratories, research teams, students, and life sciences organizations. Services can be adapted to each project's scope, data volume, timeline, and internal capacity.

Core Service Areas

Study design consultation	Bioinformatics-ready study planning, including sample and metadata structure, controls, replicates, comparison planning, feasibility assessment, and downstream analysis strategy.
Omics and NGS analysis	Quality control, exploratory analysis, RNA-seq support, differential expression, genomics support, PhIP-seq or peptide-enrichment analysis, figures, tables, reproducible scripts, and reports.
PhIP-seq library design	Peptide tiling, antigen or target selection, FASTA and protein sequence preparation, annotation tables, control peptide planning, and downstream enrichment-analysis planning.
Pipeline development	Python, R, and Bash workflows, automation, metadata validation, FASTQ organization, HPC and SLURM/Torque support, README files, SOPs, and handover documentation.
Training	Python, R, and Bash for biologists; basic bioinformatics; sequencing basics; public databases; biological data file formats; reproducibility; and research data organization.
Mentorship and guidance	Scientific and technical guidance for students, trainees, and research teams, including project planning, code review, data interpretation, and workflow documentation.

Training Topics

- Python, R, and Bash for biologists
- Basic bioinformatics concepts
- Sequencing technologies and NGS basics
- FASTA, FASTQ, BAM, VCF, and GTF/GFF files
- NCBI, SRA, GEO, GO, BLAST, and public databases
- Linux and Bash for researchers
- HPC and Alliance cluster basics
- Research data organization and reproducibility
- Workflow documentation and handover
- Practical project-based training

Service Formats

Free initial consultation	30-minute orientation meeting to discuss project goals, data type, timeline, current challenges, and possible next steps.
Hourly support	Useful for troubleshooting, technical questions, code review, short-term support, and focused technical guidance.
Fixed-price packages	Useful for defined analysis projects, workflow audits, study design consultations, documentation, or training sessions.
Customized workshops	Practical training adapted to a lab, team, course, research group, or specific dataset.
Monthly lab support	Ongoing support for labs that need regular bioinformatics help without hiring a full-time bioinformatician.

Contact us for a free 30-minute initial consultation.
