BIRD

Bioinformatics, Research & Data

Bioinformatique, Recherche & Données

Practical bioinformatics, reproducible workflows, training and research support, adapted to your data and scientific goals.

Biological insight ▪ Computational expertise ▪ Knowledge transfer

Email: contact@bird-bioinfo.ca

Montréal, Québec ▪ English and French

Member of BIOQuébec

From complex biological data to clear, reproducible results

Bioinformatics ▪ Data analysis ▪ Training

BIRD provides practical bioinformatics analysis, workflow development, training, and research support for laboratories, research teams, and life-sciences organizations.

Free 30-minute initial consultation

Tell us about your research question, data, timeline and current challenges. We will help identify appropriate next steps and discuss how BIRD can support your project.

How BIRD can support your team

From project planning and analysis to documentation and training.

01 **Study Design and Bioinformatics Consultation**
Samples, metadata, replicates, comparisons and analysis strategy.

02 **Omics and Sequencing Data Analysis**
Genomics, transcriptomics, epigenomics, metagenomics and other NGS data.

03 **Pipeline Development and Troubleshooting**
Python, R, Bash, HPC, Slurm/Torque, automation and reproducibility.

04 **Bioinformatics Training**
Programming, NGS, databases, file formats, Linux and HPC.

05 **Research Mentorship and Scientific Guidance**
Project planning, code review, interpretation and knowledge transfer.

06 **Research Data Management**
Metadata, access-controlled files, documentation and project structure.

Flexible ways to work together

- Free initial consultation
- Fixed-price packages
- One-on-one training
- Hourly support
- Customized workshops
- Monthly lab support

BIRD Services

Montréal-based bioinformatics consulting for laboratories, scientists, research teams and life-sciences organizations. Support is tailored to your project and deliverables.

Core Service Areas

Study design and consultation	Planning support for sample and metadata structure, replicate strategy, comparison design and analysis strategy.
Omics and sequencing analysis	End-to-end analysis for genomics, transcriptomics, epigenomics, amplicon, metagenomics and other sequencing projects, with quality control, interpretation, figures, tables and reports.
Pipeline development and troubleshooting	Development, optimization and troubleshooting of Python, R and Bash workflows; HPC, Slurm/Torque, automation and reproducible project structure.
Bioinformatics training	Python, R, Bash, Linux, NGS concepts, FASTA/FASTQ/BAM/VCF/GTF/GFF, NCBI/SRA/GEO/GO/BLAST, HPC and Alliance cluster basics.
Mentorship and scientific guidance	Project planning, code review, data interpretation, workflow documentation and knowledge transfer for students, trainees and research teams.
Research data management	Organization of research data, metadata, documentation, access-controlled files and project structures for clarity, reproducibility and handover.

Why BIRD? Biological insight, flexible computational expertise, reproducible delivery and practical knowledge transfer.

Specialized Expertise

WGS/WES · RNA-seq · scRNA-seq · PhIP-seq · Metagenomics · GWAS/CNV · 10x Genomics · HPC/SLURM · Biological databases · Workflow documentation

Ways to Work With Us

Free initial consultation	30-minute orientation meeting to discuss your research question, data, timeline, challenges and possible next steps.
Hourly support	Focused troubleshooting, technical questions, code review and short-term bioinformatics guidance.
Fixed-price packages	Defined analyses, workflow audits, study-design consultations, documentation or training.
Customized workshops	Hands-on training for a team, course, research group or specific dataset.
One-on-one training	Personalized training adapted to the learner's background, skill level and project.
Monthly lab support	Regular guidance, troubleshooting, training and workflow continuity across research projects.

Contact us for a free 30-minute initial consultation.
