

BIRD

Bioinformatics, Research & Data
Bioinformatique, Recherche &
Données

Practical bioinformatics, data analysis,
training, and reproducible research
workflow support for laboratories and
life sciences teams.

Bioinformatics support for your research project

From study design to reproducible analysis, workflow
development, training and scientific mentorship.

Free 30-minute initial consultation available for new projects.

Use this meeting to discuss your project goals, data type, timeline, current challenges and possible next steps. This free consultation is intended for general project orientation only.

How BIRD can support your team

A concise service menu for laboratories, research teams, students, and life sciences organizations.

01

Study Design & Bioinformatics Consultation

Planning support before data generation or analysis.

02

Omics & NGS Data Analysis

Support for omics and sequencing data analysis.

03

Pipelines & Troubleshooting

Support with computational workflows and technical bottlenecks.

04

Training for Biologists & Research Teams

Personalized training for students and research team members.

05

Mentorship & Scientific Guidance

Technical guidance for students and research teams.

Flexible formats:

- free initial consultation
- fixed-price packages
- one-on-one training
- hourly technical support
- customized workshops
- monthly lab-support plans

Professional note: Services are provided independently through BIRD and can be adapted to each laboratory's needs, budget, and timeline. Institutional logos, confidential information, or unpublished project details are not used without prior authorization.

BIRD Services

Services can be adapted to each project's scope, data volume and timeline.

Core Service Areas

Study design consultation	Bioinformatics study planning, including sample and metadata structure, replicates, comparison planning and downstream analysis strategy.
Omics and NGS analysis	Quality control, exploratory analysis, RNA-seq and differential expression, functional analysis, single-cell analysis, metagenomics, metabarcoding, ATAC-seq, methylation analysis, resistome analysis, PhIP-seq, small RNA-seq and preparation of figures, tables and reports.
Pipeline development	Python, R, and Bash workflows, HPC, SLURM/Torque support and data organization.
Training	Python, R, and Bash for biologists, basic bioinformatics, sequencing basics, biological databases: SRA, GEO, UCSC, etc., biological data file formats, research data organization, HPC and Alliance cluster basics and practical project-based training.
Mentorship and guidance	Scientific and technical guidance for students, trainees and research teams, including project planning, code review, data interpretation and workflow documentation.

Service Formats

Free initial consultation	30-minute orientation meeting to discuss project goals, data type, timeline, current challenges and possible next steps.
Hourly support	Useful for troubleshooting, technical questions, code review, short-term support and focused technical guidance.
One-on-one training	Personalized training adapted to a learner's project and skill level.
Fixed-price packages	Useful for defined analysis projects, workflow audits, study design consultations, documentation or training sessions.
Customized workshops	Practical training adapted to a lab, team, course, research group or specific dataset.
Monthly lab support	Ongoing support for labs that need regular bioinformatics help without hiring a full-time bioinformatician.

Contact us for a free 30-minute initial consultation.
